

Lou Chang

Platform / DevOps Engineer | Terraform, CI/CD, Cloud Infrastructure, Production Reliability

Toronto, ON, Canada

✉ louchang.dev@outlook.com | 📧 loustack.dev | 🐙 loustack17 | 🌐 lou-chang

Summary

Platform / DevOps engineer with 5+ years across CI/CD, cloud infrastructure, backend services, SQL systems, and production reliability. I improve delivery systems where infrastructure, release safety, and application behavior meet: cut provisioning from 2+ hours to under 10 minutes, reduced release preparation by 30+ minutes, and rebuilt a reporting path from 3 minutes to 4 seconds.

Projects & Open Source

GitOps-Managed AI Platform on GCP

Personal Project

GitHub

2026

- Modeled production-style GCP delivery with Go, Docker, Kubernetes patterns, Terraform/OpenTofu, Artifact Registry, Workload Identity Federation, and GitOps controls to reduce credential risk.

content-i18n

Personal Project

GitHub

May 2026

- Built Go localization tooling that turns AI-assisted Markdown translation into repeatable work packets with glossary rules, validation, provider fallback, and MCP automation.

Open Source Contributor

career-ops / tock

GitHub

2026

- Improved terminal report readability by shipping width-aware Markdown rendering for a Go dashboard viewer, backed by regression tests and upstream review.

Experience

Independent Software Engineer (Contract)

Self-employed

Toronto, ON

Sep. 2024 - Present

- Moved a startup from manual PoC setup toward production-ready GCP delivery, using Terraform, dev/prod separation, and CI/CD to cut provisioning from 2+ hours to under 10 minutes.
- Reduced deployment blast radius by replacing broad cloud access with identity-based CI auth, scoped secrets, isolated credentials, pinned dependencies, and PR quality gates.
- Protected commerce data integrity by building Python/FastAPI/PostgreSQL services with double-entry bookkeeping rules and Shopify GraphQL integration.

Web Development Engineer

Duotify Inc.

Taipei, Taiwan

Jun. 2020 - Jan. 2024

- Reduced release prep by 30+ minutes by keeping internal GitLab CE runners on CentOS reliable and improving Azure DevOps delivery for Windows-based C# projects.
- Removed a recurring reporting bottleneck by moving SQL Server work out of application-layer processing, cutting runtime from 3 minutes to 4 seconds.
- Protected late-stage banking delivery by taking over .NET 6 and Angular work, maintaining AWS EC2, S3, and RDS workloads through release readiness.

ERP Application Development Engineer

Unitech Computer Co., Ltd.

Taipei, Taiwan

Mar. 2019 - Jun. 2020

- Kept business-critical ERP operations stable across 20+ monthly releases by maintaining ASP.NET MVC and SQL Server systems under active production constraints.
- Reduced production support risk by resolving 8+ critical incidents annually through C#, SQL debugging, query fixes, and legacy system upgrades.

Education & Certification

Seneca Polytechnic

Diploma, Computer Programming

Toronto, Canada

May. 2024 - Aug. 2025

Hwa Hsia University of Technology

Bachelor's, Information Management

New Taipei City, Taiwan

Jun. 2018 - Aug. 2020

Microsoft

AZ-900: Azure Fundamentals

Taipei, Taiwan

Feb. 2022

Technologies

CI/CD & Automation
Cloud & Infra
Backend & Data

GitHub Actions, Azure DevOps, GitLab CI, Docker, Bash, release automation
Terraform / OpenTofu, AWS, GCP, Azure, Linux, Kubernetes, Workload Identity Federation
Python, FastAPI, C#, .NET, Go, SQL Server, PostgreSQL, GraphQL, TypeScript
