

# Lou Chang

DevOps Engineer | Cloud Delivery, CI/CD, Application Depth

Toronto, ON, Canada

✉ louchang.dev@outlook.com | 💻 loustack.dev | 📺 loustack17 | 🌐 lou-chang

## Summary

DevOps engineer with backend depth across cloud infrastructure, deployment safety, CI/CD, and live-system operations. Built a company's first AWS development and test environment for a restricted financial platform, maintained a GitLab CI/CD platform serving about 100-150 engineers, and rebuilt a contract deployment path around GCP Cloud Run.

## Experience

### Independent Software Engineer (Contract)

Self-employed

Toronto, ON  
Sep. 2024 - Present

- Built a Terraform-based AWS infrastructure foundation with IAM and GitHub Actions OIDC, S3 remote state, EC2 runtime, Docker Compose deployment, GHCR image flow, nginx, and CloudWatch health and log checks.
- Migrated an EC2-style deployment to a GCP Cloud Run path, rebuilding Terraform around Cloud SQL, Secret Manager, Artifact Registry, Workload Identity Federation, managed SSL, Cloud Monitoring, and development/production separation.
- Added branch and workflow gates, ref-scoped concurrency, environment-specific runtime configuration, and narrowed deployment identity so releases had clearer safety boundaries.

### Web Development Engineer

Duotify Inc.

Taipei, Taiwan  
Jun. 2020 - Jan. 2024

- Maintained an internal GitLab CE and CI/CD platform serving about 100-150 engineers across Linux, Windows, macOS, and mobile runners; built a production-like test environment to validate upgrades and automated recurring maintenance with Bash and Cron.
- Took over a 40-50 API financial knowledge platform and built the company's first AWS development and test environment with IAM, EC2, S3, RDS, Lambda, SAM CLI, Docker, and PostgreSQL, enabling local verification outside the client's restricted environment.
- During a week-long traffic and scraper incident on a top-3 Taiwan used-car marketplace with 50-70k monthly visits, used Azure Monitor to assess CPU, memory, and request patterns and supported Auto Scaling, production-to-staging failover, and WAF stabilization.

### ERP Applications Engineer

Unitech Computer Co., Ltd.

Taipei, Taiwan  
Mar. 2019 - May 2020

- Supported a nationwide B2B ordering platform whose daily product search, inventory, quotation, and order workflows depended on stable legacy web and database systems.

## Education & Certification

### Seneca Polytechnic

Diploma, Computer Programming

Toronto, Canada  
May 2024 - Aug. 2025

### Hwa Hsia University of Technology

Bachelor's, Information Management

New Taipei City, Taiwan  
Sep. 2018 - Jun. 2020

### Microsoft

AZ-900: Azure Fundamentals

Taipei, Taiwan  
Feb. 2022

## Technologies

**Infrastructure**  
**CI/CD & Operations**
