Highlights

- Brought a startup from PoC to production-ready by designing its cloud infrastructure and CI/CD on GCP with Terraform and OIDC-based deployments, cutting provisioning from 2+ hours to under 10 minutes.
- Optimized critical production workflows from 3 minutes to 4 seconds across healthcare and finance platforms while maintaining system reliability under live operational constraints.
- Delivered backend systems from enterprise ERP (.NET, SQL Server) to domain-driven startup platforms (Python, FastAPI, PostgreSQL), with increasing production ownership at each stage.

Experiences

Self-employed (Remote)

Toronto, ON, Canada

Independent Software Engineer (Contract)

Sep. 2024 - Present

- Designed and implemented infrastructure and CI/CD strategy to bring a startup from PoC to production-ready; migrated from AWS to GCP Cloud Run using Terraform with OIDC-based deployments and environment separation, cutting provisioning from 2+ hours to under 10 minutes.
- Built CI/CD pipelines enforcing quality gates on every PR and auto-deploying validated changes on merge; hardened deployment security by isolating CI credentials, pinning the supply chain, and scoping secrets per environment.
- Designed and delivered backend services for a commerce startup using Python/FastAPI with domain-driven design and PostgreSQL; implemented double-entry bookkeeping for the affiliate wallet and integrated Shopify via GraphQL for real-time product data.

Duotify Inc.

Taipei, Taiwan

Web Development Engineer

Jun. 2020 - Jan. 2024

- Built and maintained CI/CD pipelines in Azure DevOps; administered self-hosted GitLab CE on Linux (CentOS), maintaining runner availability and deployment reliability while reducing release preparation time by 30+ minutes.
- Reduced a critical reporting workflow from 3 minutes to 4 seconds by replacing application-layer transformations with optimized SQL Server stored procedures, resolving a recurring bottleneck across healthcare and finance client platforms.
- Developed backend API services (ASP.NET Core) for government research and financial services clients; provisioned and operated AWS environments (EC2, S3, RDS) supporting production and test workloads.

Unitech Computer Co., Ltd.

Taipei, Taiwan

ERP Application Development Engineer

Mar. 2019 - Jun. 2020

- Maintained B2B and internal ERP systems (ASP.NET MVC, SQL Server), delivering 20+ monthly updates over 16 months while preserving production stability and data integrity across business-critical operations.
- Resolved 8+ critical production issues annually through disciplined debugging and SQL Server query optimization; evaluated infrastructure modernization paths for legacy system upgrades.

SYSTEX UCOM Information Technology Co., Ltd.

Taipei, Taiwan

Software Engineering Intern

Oct. 2018 - Mar. 2019

- Completed a structured C#/ASP.NET engineering program; contributed to production system maintenance and version control workflows in an enterprise environment.

Education

Seneca Polytechnic

Diploma, Computer Programming

Toronto, Canada

May. 2024 - Aug. 2025

Hwa Hsia University of Technology

Bachelor's, Department of Information Management

New Taipei City, Taiwan

Jun. 2018 - Aug. 2020

Technologies

CI/CD & Automation

Azure DevOps Pipelines, GitLab CI (self-hosted), GitHub Actions, Docker, Shell scripting

Cloud & Infrastructure

AWS (EC2, S3, RDS), GCP (Cloud Run), Azure, Terraform, Linux (CentOS/RHEL) · AZ-900

Development

C#, .NET (ASP.NET Core/MVC), Python, FastAPI, SQL Server, PostgreSQL, TypeScript, Bash
